Astronomy 110: Introduction to the Solar System
F. Crawford
Spring 2009 Course Information and Policies Addendum

Addendum to “Assignments and Tests” Section

In addition to the assignments that I will post and collect roughly weekly, I will also collect **lecture summaries of no more than one single page** at the start of each lecture (typed, please).

- The summary should identify and summarize the important key points (concepts) from the previous lecture.
- At the end of the summary, identify one issue that you find most confusing OR the most interesting issue/concept to you (if you understood everything).

(By the way, these summaries are a good jumping off point for discussion at the start of class of any confusing issues from the previous lecture, so take advantage of that.)

If for some reason you were not present at the lecture (try to avoid this...), then make sure you grab the notes from somebody and get the lecture summary to me by the lecture following the due date. In case of **serious** illness and the like, let both the prefect and me know, and we can make accommodations together (the three of us).

Example: We have class on Mon (you were sick), I collect summaries from people on Wed, but you have till Fri to get me both Mon’s and Wed’s lecture summaries. If you missed both Mon and Wed, then you need to come see me about what’s going on.

So in the end, everybody turns in a summary for every lecture.

These summaries will be included as part of the “Assignments/Written Work” and the “Participation/Attendance/Effort” portions of the final grade.
